

PanAIRama V2 FAQs

Q. *I have some PanAIRama V1 CD installed but when I install PanAIRama V2 it doesn't show all of the V1 CD titles in the drop down menu.*

A. This problem can occur if one or more of your V1 CD titles has been installed more than once. To overcome this problem please check all your V1 directories (normally c:\dola\data\ ...) for the existence of 4 files called CUSTOTHR.MDB, CUSTOTHR.LDB, DOLAOTHR.MDB and DOLAOTHR.LDB. If any these 4 files exist in any directory, delete this directory and re-install the PanAIRama V1 CD title for this deleted directory. If the V1 directories have been correctly installed then they should contain the 4 database files CUSTOM.MDB, CUSTOM.LDB, DOLA.MDB and DOLA.LDB. Once the V1 directories are correct, you will need to re-run the PADBManager software delivered on your V2 CD.

Q. *I have installed PanAIRama V2 but it doesn't show any of my V1 CDs on the V2 CDs.*

A. This may be similar to the question above. However, the best way to get both V1 and V2 CD's working together is to delete all the V1 CDs from your hard disk before you install PanAIRama V2. Re-Install all your V1 CDs making sure that the installation is successful after each CD. Then re-install PanAIRama V2.

If at a later date you now want to install additional V1 CDs you must run the PABDManager after successful installation of the V1 CDs.
